

I. Choose the correct answer: 4x1=4

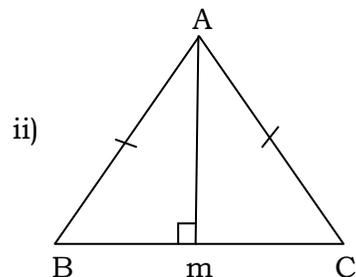

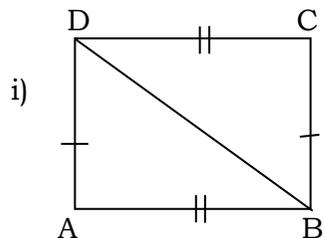

- Two angles are _____ if their sum is 90° .
 a) complementary b) linear pair c) supplementary
- Two angles are called adjacent angles if they have _____.
 a) common vertex b) common arm c) both (a) and (b)
- The exterior angle of a triangle is equal to the sum of two _____.
 a) alternate angles b) interior opposite angles
 c) exterior angles
- The sum of all the three angles of a triangle is _____.
 a) 180° b) 90° c) 360°

II. Answer the following: 3x2=6

1. In the figure AB is parallel to CD, find x .

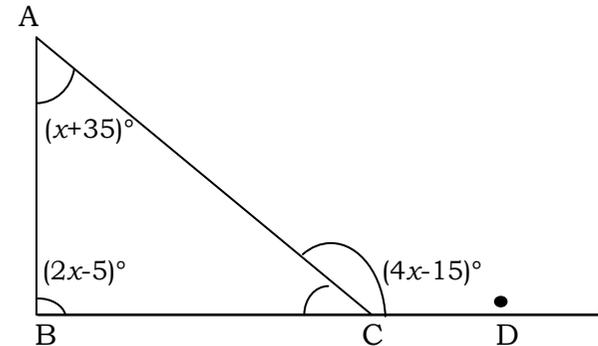

2. Consider the given pairs of triangles and say whether each pair is that of congruent triangles. If the triangles are congruent say "how", if they are not congruent say "why" and also say if a small modification would make them congruent.

III. Answer the following:

3x5=15

1. Find all the three angles of the ΔABC

- The angles of a triangle are in the ratio 1:2:3, find the measure of each angle of the triangle.
- ΔABC and ΔDEF are two triangles in which $AB=DF$, $\angle ACB = 70^\circ$, $\angle ABC=60^\circ$, $\angle DEF = 70^\circ$ and $\angle EDF=60^\circ$. Prove that the triangles are congruent.
